

WATERMELON SOAP PRODUCT KIT

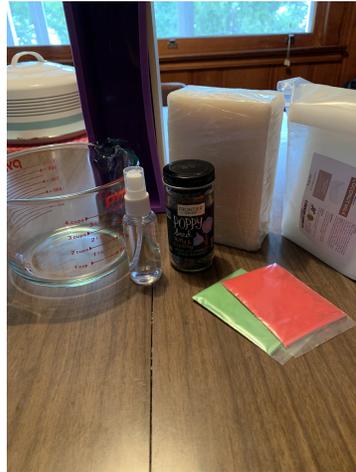

Introduction

These instructions will walk you through how to assemble watermelon soap. You can take what you learn here to create new products like lip balms and sugar scrubs! We hope that you enjoy this project. Make sure that you have received all of the materials necessary to create your product. Especially your survey sheet, which you should have already completed.

Now ready your workspace to ensure an enjoyable and efficient production. Is your space large enough? Has it been wiped clean?

Materials

- Soap Base
- Hair net
- Isopropyl Alcohol
- Markers
- Tablespoon
- Mica Colorant
- Product Bags
- Silicone Soap Mold
- Spray Mist Bottle
- Sponge
- Product Tags
- Fragrance Oil
- Workplace Preparation Kit
- Whisk
- Mixing Bowl
- Personal Protective Equipment

Completion

This kit will make 25 products. You can then sell these items independently, at a SSV Work & Learn Marketplace Event or around your community.

Steps

A Place 1/2 pound the cubes into a large measuring cup and melt in the microwave in 30-second increments, stirring well after each time. Continue until it liquifies.

2 When the soap is completely melted, add 10 drops of fragrance oil and green colorant (as much as needed to achieve the desired color).

3 Pour 3/4 of the green soap into the bottom of the soap mold and spritz the top of the liquid soap with isopropyl alcohol to remove any air bubbles. Allow to firm for 15-20 minutes.

4 Take the remaining dark green soap (still in the measuring cup) and add 1/4 pound of white soap cubes. Melt in the microwave and stir until fully mixed (will be a light green color).

Spritz the top of the dark green layer with alcohol again and pour the light green mixture into the soap mold. Spritz with alcohol again to remove any air bubbles and allow to firm for 15-20 minutes.

5

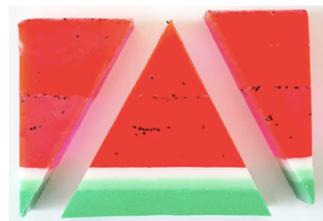

6 Melt 1/4 pound of white soap cubes in the microwave. Add 5-10 drops of watermelon fragrance oil. Spritz the light green layer with alcohol, pour the white layer into the soap mold, and spritz the top with alcohol to remove bubbles. Allow to firm for 15-20 minutes.

7 Cut 2 pounds of clear soap base into cubes. Microwave until fully melted and add pink/red colored mica powder until it reaches the color you desire. Then stir in 15-25 drops of watermelon fragrance oil and 1 tbsp. of poppy seeds.

8 Spritz the white layer with alcohol, pour the red layer into the soap mold, sprinkle the top with a few more poppy seeds, and spritz one last time with alcohol to remove bubbles. Allow it firm for 90 minutes or until soap has completely hardened (time will depend on temperature and humidity).

9 Carefully remove the silicone liner from the wooden mold, and then remove the soap from the silicone. You can expect to make 10-12 soaps from this mold. Use the included slicer to slice the soap into bars. Trim the corners off the bars to create triangle, watermelon looking, soap bars.

10 Create a personalized label for the outside of your product box. Have fun creating a brand name and business logo for your product. Repeat these steps until you have run out of materials.
